

Finger/style" recognition feature for touch screen (Windows 10)

Réf. : ST-PIL-STY-ACT

With the active pen driver, your Speechitouch touchscreen is able to differentiate your finger from the pen and assign different actions to them:

- Write and draw with your pen, whatever the model, just like a pencil on paper.
- Use your finger as a mouse to select, move objects, scroll through pages of a document...

By installing this driver on your screen, your interaction with the screen becomes more natural and intuitive.
